

REGULATOR BFA

The LMT Advanced Technologies (LMT-AT) blank firing adapter (BFA) is built specifically to interface with the LMT-AT Regulator line of muzzle devices. The Regulator BFA is available in both 1/2 x 28 and 5/8 x 24 thread pitch configurations to support either 5.56 or .30 caliber platforms. The BFA is designed to capture a live round in the event one is accidentally chambered.

The Regulator BFA is capable of being adjusted for gas flow in the event of an over-gassed or customized build. This adjustment can be carried out by an armorer by opening the four starter gas holes found on the exterior of the BFA. A drill press is recommended for this adjustment and such a change is irreversible.
